

# Metal to Metal Sealing

Sealant or seals must be used any time we have metal to metal mating and fluid is being managed.

- Originally the factory did not need sealant. The metal was new and a machine tightened the parts together very tight.

**ALL METAL TO METAL SEALING, MUST USE SEALANT.  
Any Sealant that you like.  
We Use 3M 03602,  
Black Super Weatherstrip and Gasket Adhesive.**
